## [ICD-10 : F84.0](#)

### Definition

Autism spectrum disorder is characterized by persistent deficits in reciprocal social interaction and social communication, and by a range of restricted, repetitive, inflexible patterns of behaviour and interests and sensory sensitivities that may change in character during development. These deficits are usually a pervasive feature of the individual's functioning in all settings, although they may vary in degree according to the social or educational context. In many cases development is abnormal in infancy, although this may only become evident in retrospect. Symptoms usually emerge during early childhood, but deficits may not become fully manifest until social demands exceed limited capacities.

### Inclusions

- kanner's syndrome
- Autistic disorder
- Infantile: autism
- Kanner syndrome
- Infantile: psychosis

### Exclusions

- autistic psychopathy

5A11.1 Autism spectrum disorder without disorder of intellectual development or impairment in functional language

## Parent

- [5A11 Autism spectrum disorder](#)

Show all ancestors up to top 

### Definition

This diagnostic qualifier is assigned when definitional requirements for Autism spectrum disorder are met, intellectual functioning and adaptive behaviour are found to be at least within the average range (>?2.3 percentile), and the individual is generally able to use language for effective communication.

### All Index Terms

Hide index terms 

- Autism spectrum disorder without disorder of intellectual development or impairment in functional language

5A11.2 Autism spectrum disorder with disorder of intellectual development

### Parent

- [5A11 Autism spectrum disorder](#)

Show all ancestors up to top 

### Fully Specified Name

Autism spectrum disorder with disorder of intellectual development and without impairment in functional language

### Definition

This diagnostic qualifier is assigned when both definitional requirements for Autism spectrum disorder and a Disorder of intellectual development are met. The individual is generally able to use language for effective communication.

### All Index Terms

Hide index terms 

- Autism spectrum disorder with disorder of intellectual development

- Autism spectrum disorder with disorder of intellectual development and without impairment in functional language

5A11.3 Autism spectrum disorder with limitation in communication

### Parent

- [5A11 Autism spectrum disorder](#)

Show all ancestors up to top 

### Fully Specified Name

Autism spectrum disorder with impairment in functional language and without disorder of intellectual development

### Definition

This diagnostic qualifier is assigned when definitional requirements for Autism spectrum disorder are met and there is impairment in functional language to a specified degree. Intellectual functioning and adaptive behaviour are found to be at least within the average range (>?2.3 percentile).

### All Index Terms

Hide index terms 

- Autism spectrum disorder with limitation in communication
- Autism spectrum disorder with impairment in functional language and without disorder of intellectual development

5A11.31 Autism spectrum disorder with marked impairment of functional language

### Parent

- [5A11.3 Autism spectrum disorder with limitation in communication](#)

Show all ancestors up to top 

## Definition

There is marked impairment in functional language relative to the individual's age, but the individual is able to use meaningful phrases or simple sentences to refer to objects or to indicate their needs.

## All Index Terms

Hide index terms 

- Autism spectrum disorder with marked impairment of functional language
- Autism spectrum disorder with moderate limitation in functional language

5A11.32 Autism spectrum disorder with pervasive impairment of functional language

## Parent

- [5A11.3 Autism spectrum disorder with limitation in communication](#)

Show all ancestors up to top 

## Definition

There is pervasive impairment in functional language relative to the individual's age. The individual uses only a very limited number of words to refer to concrete objects or to indicate their needs.

## All Index Terms

Hide index terms 

- Autism spectrum disorder with pervasive impairment of functional language
- Autism spectrum disorder with severe impairment in functional language

5A11.33 Autism spectrum disorder with complete impairment of functional language

## Parent

- [5A11.3 Autism spectrum disorder with limitation in communication](#)

Show all ancestors up to top 

## Definition

There is complete impairment in functional language relative to the individual's age. The individual produces no intelligible language across all contexts. If the capacity for uttering words is present, these do not refer to meaningful objects or actions (e.g., echolalia).

## All Index Terms

Hide index terms 

- Autism spectrum disorder with complete impairment of functional language
- Autism spectrum disorder with profound impairment in functional language

5A11.3Z Autism spectrum disorder with limitation in communication, unspecified

## Parent

- [5A11.3 Autism spectrum disorder with limitation in communication](#)

Show all ancestors up to top 

This category is an automatically generated '**unspecified**' category for the linearization.

## All Index Terms

Hide index terms 

- Autism spectrum disorder with limitation in communication, unspecified

5A11.4 Autism spectrum disorder with both disorder of intellectual development and structural language impairment

### Parent

- [5A11 Autism spectrum disorder](#)

Show all ancestors up to top 

### Definition

This diagnostic qualifier is assigned when definitional requirements for both Autism spectrum disorder and Disorder of intellectual development are met alongside impairment in functional language to a specified degree.

### All Index Terms

Hide index terms 

- Autism spectrum disorder with both disorder of intellectual development and structural language impairment

5A11.Y Other specified autism spectrum disorder

### Parent

- [5A11 Autism spectrum disorder](#)

Show all ancestors up to top 

This category is an automatically generated '**other specified**' category for the linearization.

### All Index Terms

Hide index terms 

- Other specified autism spectrum disorder

5A11.Z Autism spectrum disorder, unspecified

### Parent
